PROFESSIONAL SUMMARY

Full-Stack Developer with 2.8+ years of experience designing and delivering scalable SaaS and enterprise applications. Strong frontend depth in Next.js and React combined with hands-on backend ownership — independently architecting REST APIs, NestJS microservices, and full-stack systems using Node.js, PostgreSQL, and MongoDB. Experienced across banking-grade KYC platforms, AI-integrated SaaS products, and e-commerce systems.

TECHNICAL SKILLS

Languages:	TypeScript, JavaScript
Frontend:	Next.js (App Router, Page Router, Monorepo), React.js, Redux Toolkit, RTK Query, Zustand, Context API, Tailwind CSS, GSAP, Fabric.js, Arco Design, Material UI, shadcn/ui
Backend:	Node.js, NestJS, Express.js, Fastify
Databases:	MongoDB, PostgreSQL
ORM / ODM:	Prisma ORM, Mongoose
Concepts:	REST API Design, RBAC, OAuth 2.0, Authentication & Authorization, Microservices, WebSockets, Real-time Systems, System Architecture
DevOps / Tools:	Git, GitHub, GitLab CI/CD, Docker
AI & Integrations:	OpenAI API, Google Gemini API, Replicate (Flux), Cloudinary, Razorpay, Nodemailer

EXPERIENCE

Full-Stack Developer | Underscorete Technology Pvt Ltd

Aug 2023 – Present

- Delivered end-to-end features across frontend and backend for banking, SaaS, and e-commerce platforms.
- Independently designed and built multiple backend systems including REST APIs, case management services, and e-commerce order flows.
- Developed complex frontend systems: dashboards, KYC workflow UIs, document review portals, and canvas-based design tools including rich animations.
- Designed scalable APIs with RBAC, audit logging, workflow orchestration, and performance optimization.
- Worked on real-time systems using Socket.IO and AI-integrated applications with OpenAI and Google Gemini.
- Collaborated in cross-functional agile teams to ship production-ready banking and enterprise software.

KEY PROJECTS

KYC Remediation BO-Portal | Emirates Development Bank (via Underscorete Technology Pvt Ltd)

Tech Stack: Next.js 15 (App Router), TypeScript, NextAuth (Keycloak), REST APIs, Node.js, Axios, Arco Design

- Led **80%** of the KYC Remediation BO Portal frontend — owning document review, application forms, comments, audit trail, and case tracking workflows.
- Built a **schema-driven form system** with a unified floating error panel — aggregating field and document errors with click-to-open navigation for flagged documents.
- Implemented a **full audit trail UI** with tree-structured change tracking, showing from/to transitions per user action.
- Built **Next.js server actions** to orchestrate calls across the workflow engine and EDB Config API (cases, comments, audits, roles, permissions).
- Integrated **Keycloak with Next.js** via NextAuth for secure SSO and **RBAC-based** access control.

EDB Config API | Emirates Development Bank (via Underscorete Technology Pvt Ltd)

Tech Stack: TypeScript, NestJS, Prisma, PostgreSQL, Keycloak, Kogito, Winston

- Contributed to a **BFF microservice** serving the KYC portal — managing case references, comments, audits, roles, and permissions as a dedicated backend service.
- Developed **NestJS modules** for case creation flows with validation, duplicate detection, comments, audits, roles, permissions for Kogito workflow orchestration.
- Optimized Prisma queries and added structured logging with Winston for improved performance and observability.

E-Commerce Platform | Rudralife (via Underscorete Technology Pvt Ltd)

Tech Stack: Next.js (Page Router), TypeScript, MaterialUI, MongoDB, Next.js API Routes, Razorpay, Nodemailer, Monorepo

- Architected and built **70%+ of backend APIs** independently — covering product catalog, SKU/variant management, cart, order processing, email workflows, and site management.
- Designed **complex product data models** supporting SKUs, attributes, and pricing tiers in MongoDB.
- Implemented **geo-based access control** to restrict platform availability by region, with dynamic multi-currency support (INR, USD, GBP) based on user location.
- Integrated **Razorpay payment gateway** with order lifecycle management and payment status handling.
- Built the **80%+ frontend** using Next.js Page Router with SSR/SSG strategies for SEO and performance, within a monorepo architecture with shared types across layers.

Solar Connect – AI Solar Lead Platform | Client Project (via Underscorete Technology Pvt Ltd)

Tech Stack: Next.js, TypeScript, Node.js (Express), MongoDB, JWT, Google Gemini, Nodemailer, shadcn/ui

- Built modular **backend APIs** with centralized middleware for an AI-driven solar lead-capture platform.
- Designed a **JSON-driven conversational engine** where admins can define infinite-level nested question sets — backend logic dynamically tracks collected answers, determines the next question, and resumes any incomplete branches after nested flows finish.
- Built **adaptive UI rendering** per question type (forms, file upload, multiple choice) with hybrid answer extraction — accepting both UI-selected and free-text responses intelligently.
- Reduced **LLM token usage by ~70%** via optimized prompt orchestration and backend-controlled flow decisions.
- Built an **AI-powered email feature** enabling admins to generate and send personalized emails to collected leads using Google Gemini and Nodemailer.

Professional Design Suite | Solarnets | Client Project (via Underscorete Technology Pvt Ltd)

Tech Stack: TypeScript, Next.js 15, Fabric.js, Redux Toolkit, TailwindCSS, Material UI

- Built a **browser-based vector editor** for solar net design — supporting real-scale property layout, shape placement/resizing on a grid, and dimension-aware measurements.
- Developed a **custom geometry engine** with snapping, collision detection, automated placement logic, alignment guides, and zoom-aware rendering.
- Implemented a **full order-to-assembly workflow** — customer-created net designs flow to an admin assembly editor where admins drop and arrange ordered nets to calculate total area coverage.
- Delivered **export functionality** (PDF/image) and advanced UX features including multi-input handling and undo/redo system.

Genique AI | AI Image Generation SaaS Platform | Personal Project

Tech Stack: TypeScript, Next.js 15, Node.js, Express, MongoDB, Cloudinary, Zustand, Axios, Replicate AI, shadcn/ui

- Built a **full-stack AI SaaS platform** for image generation with custom model training workflows, real-time generation tracking, and queue-based job orchestration via Replicate AI.
- Implemented **JWT-based authentication** with secure file handling using Cloudinary/S3.
- Developed **gallery and album management** with drag-and-drop uploads and optimized state handling using Zustand.
- Built a visually rich frontend with **smooth animations**, glassmorphism UI, and multiple switchable color themes.

2018

EDUCATION

Bachelor of Arts (B.A.) - University of Burdwan

PROFESSIONAL DEVELOPMENT

- Completed full-stack development training through Sharpener Tech.
- Strengthened backend, system design, and frontend skills via targeted Udemy courses.
- Actively applies AI-assisted development tools and modern engineering workflows to maintain clean, scalable, production-grade code.
